SUMMARY

AI research engineer who runs **careful experiments**: a clear question, fair baselines, ablations and results anyone can reproduce. MSc in Artificial Intelligence, Queen's University, Canada (GPA 4.30 / 4.30). Master's thesis, MinimalLM, made three open LLMs generate 47.6% fewer tokens with no answer cut off, and reports its limits openly. Other work covers AI coding agents on GitHub, self-supervised vision and deep reinforcement learning; at Injaz Tech, designs the evaluation for an LLM assistant.

SKILLS

Research: experiment design, ablation studies, statistical testing (McNemar, bootstrap), reproducible benchmarks
LLM evaluation: MT-Bench, AlpacaEval, Arena-Hard-Auto, LLM-as-judge and judge validation, BERTScore, ROUGE
Areas: efficient LLM inference, RAG, self-supervised learning, reinforcement learning, AI agents
Tools: PyTorch, Hugging Face Transformers, scikit-learn, Gymnasium, FAISS
Engineering: Python, Git, Linux, NVIDIA GPUs, AWS

RESEARCH PROJECTS

MinimalLM — Master's thesis, published on arXiv
2026
Python, PyTorch, Hugging Face Transformers, NVIDIA A40

- Question: can an unchanged LLM write fewer tokens and still give a complete answer? Tested on 330 questions (MT-Bench, AlpacaEval, Arena-Hard-Auto) and six other languages.
- Found that the simplest stop rule saves 32.6% but cuts off 59.3% of answers; added a guardrail instruction and a completeness check so the saving no longer costs the answer.
- A training-free method that makes open LLMs (Mistral-7B, Llama-3.1-8B, Qwen2.5-3B) give shorter answers that are still complete: **47.6% fewer tokens, 19–68% faster, no answer cut off** (0 of 990).
- Compared six versions on 5,940 answers to show what each part adds: without the completeness check 17.3% of answers are cut off; without the instruction the saving falls to 19.8%.
- Honest limits: shorter answers more often leave out part of a broad question (22.9% vs 12.6% by the judge), and the evaluation is internal, with no independent human study.

Human vs. AI-Agent Pull Requests — research study
Python, GitHub data mining, statistics

- Built a reproducible pipeline that mines GitHub to compare review effort on pull requests written by AI agents and by people.

SimCLR-Vision-SSL — self-supervised image model
2026
PyTorch, SimCLR, SupCon, ONNX, FAISS

- Ran a controlled 42-experiment study to find which image augmentations actually improve the model; best result 84.30% top-1 accuracy.
- Exported the model to **ONNX** and served image search through a **FAISS** index, ready to deploy.

RL-Cloud-Autoscaler — deep RL for cloud scaling
2026
Python, Gymnasium, PPO, DQN

- Designed the environment from scratch: state, actions and a reward that penalises both overspending and slow responses.
- Compared both agents with static allocation and threshold-based autoscaling, the policies real teams run.

Also: HORUS Sentinel (multi-agent OSINT) · Horus-OSINT (Llama-3-8B fine-tuned on AWS) · SCRAP (satellite collision risk, 48+ hours ahead).

PUBLICATION

Say Less, Mean Better: Training-Free Verbosity Control for Language Models
Nov 2026
M. Alyosify, M. Imbabi, E. Elkhamisi, R. Ferdousi · arXiv:2611.04107 (cs.CL)

EXPERIENCE

AI Engineer Intern — Oct 2026 – Present
Injaz Tech (Injaz Group, formerly Fingerprint Consultancy) — Maadi, Cairo

- Designed the evaluation: retrieval benchmarks (top-1, MRR), category-level scores and an LLM judge checked against a fixed metric (agreement 0.82).
- Treated the answer grader as a model in its own right and measured it: its recall on bad answers rose from 17% to 88%.
- Raised top-1 retrieval accuracy from **75% to 94%** and cut wrong refusals from 5 in 20 to 1 in 20.

Part-Time Machine Learning Instructor — Jul 2025 – Present
National Telecommunication Institute (NTI) — Egypt

- Teach **90-hour hands-on machine learning bootcamps**: regression, SVM, KNN, Naive Bayes, PCA and neural networks, in Python labs.
- Write the final exams and assess the trainees' end-to-end capstone projects.

Systems Engineer (Military Service) — Feb 2024 – Mar 2025
National Company for Roads Building & Development — Cairo

- Supported the backend systems of Egypt's national toll network, used by **more than half of the country's vehicles** across 70%+ of national roads.

Online Instructor — 2020 – Present
Udemy & YouTube (Arabic courses) — Remote

- Created Arabic courses on algorithms, discrete mathematics, probability and statistics: **10,000+ learners, 700K+ views**.

EDUCATION

MSc in Artificial Intelligence — Sep 2025 – Oct 2026
Queen's University — Kingston, Canada

- GPA **4.30 / 4.30** · Completed October 2026 · **Digilians Presidential Scholarship** (competitive national AI fellowship)
- Thesis: MinimalLM — shorter LLM answers that stay complete (supervisor: Dr. Rahatara Ferdousi); published on arXiv
- Coursework: Large Language Models, Generative AI, Deep Learning, Reinforcement Learning, Cloud Computing, End-to-End ML Pipelines

BSc in Computer & Information Science (Bioinformatics) — Sep 2019 – Jul 2023
Assiut University — Assiut, Egypt

- GPA 3.53 / 4.00 (Very Good with Honours) · Graduation project graded A+
- Graduation project: Vitalism Solution, vital signs from ordinary video; **Microsoft Imagine Cup 2023 semi-finalist**

CERTIFICATIONS

- Deep Learning Specialization (DeepLearning.AI, 2026)
- Machine Learning Specialization (DeepLearning.AI & Stanford, 2026)
- Fundamentals of Reinforcement Learning (University of Alberta, 2026)
- IBM AI Developer Professional Certificate (IBM, 2026)
- AWS Certified Cloud Practitioner (Amazon Web Services)

AWARDS & LEADERSHIP

- Semi-Finalist, Microsoft Imagine Cup 2023
- Finalist, ISEIC 2023 (international research competition)
- 1st Place, Smart Cities Hackathon 2022 (77 university teams)
- Ideal Student Award, Faculty of Computers & Information, Assiut University (2022–2023)
