Mahmoud Sayed Youssef Kotb

has successfully completed the online, non-credit Specialization

Mastering NLP: Tokenization, Sentiment Analysis & Neural MT

In this specialization, learners gained practical skills in Natural Language Processing (NLP), progressing from foundational techniques to advanced neural models. They explored key concepts such as text preprocessing, tokenization, sentiment analysis, and language modeling using tools like NLTK and spaCy. Projects included tasks like named entity recognition, lexicon-based sentiment scoring, and machine learning classification. Learners then advanced to deep learning architectures, working with RNNs, LSTMs, and transformers such as BERT and MarianMT for tasks like neural translation and contextual text analysis. By completing the specialization, learners demonstrated the ability to design, build, and deploy real-world NLP applications across diverse domains.

The online specialization named in this certificate may draw on material from courses taught on-campus, but the included courses are not equivalent to on-campus courses. Participation in this online specialization does not constitute enrollment at this university. This certificate does not confer a University grade, course credit or degree, and it does not verify the identity of the learner.
