SELECTED PROJECTS

MinimalLM: Verbosity-Aware Decoding for Efficient Language Model Generation *2026 – Present*
MSc Research Project (CISC 898), Queen's University · PyTorch · Hugging Face · NVIDIA A40 GPU

- Research on **training-free decoding-time control** of LLM verbosity, tested against plain truncation on **Mistral-7B, Llama-3.1-8B and Qwen2.5-3B**. An entropy-gated **logits processor** cut **25.5–34.9%** of MT-Bench tokens within pre-registered BERTScore margins, but an audit showed the saving was truncation.
- A survey of **23** training-free mechanism families found none that beat truncation without oracle labels. The proposed **Entailment-Licensed In-Decoding Elision** (sentence encoder + NLI model) beats truncation on every model, removing 0.9–2.2% of tokens; scoping it to discourse units cut reader-judged harmful elisions from 49–69% to **10.2%**.

HORUS Sentinel — Autonomous Multi-Agent OSINT & Threat-Intelligence Platform *2026*
Python · Multi-Agent Systems · Fine-Tuned LLM · Knowledge Graphs · Self-Hosted Inference

- Architected an autonomous intelligence analyst: a **swarm of specialised agents** continuously collects open-source intelligence and correlates findings into a **living knowledge graph**, over which a self-hosted fine-tuned LLM produces **prioritised, evidence-backed reports**.

SimCLR-Vision-SSL — Self-Supervised Contrastive Representation Learning *2026*
PyTorch · SimCLR · SupCon · ONNX · FAISS

- Built a self-supervised vision pipeline with a **42-experiment augmentation sweep**, a semi-supervised **SupCon** extension and deployment-ready **ONNX/FAISS** retrieval, reaching **84.30% top-1 accuracy**.

RL-Cloud-Autoscaler — Cloud Resource Provisioning via Deep Reinforcement Learning *2026*
Python · PPO · DQN · Gymnasium · Cost Optimisation

- Built a **custom Gymnasium environment** and trained **PPO** and **DQN** agents to optimise the **cost–latency trade-off** under fluctuating demand, benchmarked against static and threshold-based autoscaling baselines.

Additional Projects

- **Horus-OSINT** — fine-tuned **Meta-Llama-3-8B** on **159,826** GTD/GDELT records and deployed it on **AWS** as an interactive threat-intelligence assistant.
- **Automated Multimodal Agent** — agentic workflow converting PDFs into narrated PowerPoint decks end to end.
- **SCRAP** — supervised ML pipeline predicting satellite collision risk **48+ hours** before closest approach.
