PROFESSIONAL SUMMARY

AI Research Engineer whose work is defined by **experimental rigour**: pre-registered protocols, honest baselines, ablations and reproducibility on pinned hardware. Completing an **MSc in Artificial Intelligence at Queen's University, Canada** (expected **Nov 2026**) on a **Digilians Presidential Scholarship**; master's research (**MinimalLM**) asks whether training-free decoding control can cut LLM verbosity better than plain truncation, reports the **negative result** honestly, and introduces an **NLI-licensed elision method** that does beat truncation. As an **AI Engineer Intern at Injaz Tech**, applies the same rigour to LLM systems, evaluating graders and judges as models in their own right. Additional empirical work spans a **42-experiment** self-supervised augmentation study, a **GitHub-mining study of human versus agentic code review**, and deep-RL benchmarking against realistic baselines. Comfortable owning a research question end to end — literature, hypothesis, implementation, evaluation, and a result that survives scrutiny.

EDUCATION

MSc in Artificial Intelligence — *Sep 2025 – Nov 2026*
Queen's University, Kingston, Ontario, Canada — Expected Nov 2026 · GPA: 4.30 / 4.30

- **Digilians Presidential Scholarship** — competitive national AI graduate fellowship.
- **Master's Research Project (CISC 898):** *MinimalLM: Verbosity-Aware Decoding for Efficient Language Model Generation* — Supervisor: Dr. Rahatara Ferdousi.
- Coursework: **Large Language Models, Generative AI, Deep Learning, Reinforcement Learning, Cloud Computing, End-to-End ML Pipelines**.

B.Sc. Computer & Information Science (Bioinformatics) — *Sep 2019 – Jul 2023*
Assiut University, Egypt — GPA: 3.53 / 4.00

- Graduation Project: **Vitalism Solution** — contactless vital-sign estimation via rPPG. **Grade A+**; **Semi-Finalist, Microsoft Imagine Cup 2023**; **Finalist, ISEIC 2023**.

RESEARCH & TECHNICAL SKILLS

Research Methodology	Pre-Registered Evaluation Protocols, Paired Non-Inferiority Testing, Statistical Hypothesis Testing, Ablation Studies, Controlled Augmentation Sweeps, Baseline Design, Error Analysis, Deterministic & Reproducible Experimentation, Scientific Writing
Research Areas	Efficient LLM Inference & Decoding, Self-Supervised & Contrastive Learning, Deep Reinforcement Learning, Multi-Agent Systems, Empirical Software Engineering, Applied Predictive Modelling
Benchmarks & Metrics	MT-Bench, YapBench, XSum, SQuAD-v2, BERTScore, ROUGE, Exact-Match / F1, Length-Controlled LLM-as-Judge, Top-1 / Retrieval Metrics (MRR), RAG Groundedness, TTFT & Inter-Token Latency, GPU Energy (NVML)
Frameworks	PyTorch, Hugging Face Transformers / PEFT / Datasets, TensorFlow, Scikit-learn, Gymnasium, Optuna, SHAP, NumPy, Pandas, PySpark, LangChain, LangGraph
Infrastructure	NVIDIA A40 GPU, AWS, Docker, ONNX, FAISS, FastAPI, Git/GitHub, Linux, CI/CD
Programming	Python, C++, C, SQL, C#, Go, MATLAB, Bash

RESEARCH PROJECTS

MinimalLM: Verbosity-Aware Decoding for Efficient Language Model Generation — *2026 – Present*
MSc Research Project (CISC 898), Queen's University · Supervisor: Dr. Rahatara Ferdousi

- **Question:** can a training-free controller inside the decoding loop cut LLM output tokens while preserving content, measured against the simplest baseline — truncating the model's own answer to the same length? Tested on **Mistral-7B, Llama-3.1-8B and Qwen2.5-3B**.
- **Finding:** an entropy-gated **logits processor** removed **25.5–34.9%** of tokens on MT-Bench development questions (**19.9–34.2%** on a sealed test split) within pre-registered BERTScore margins, but an audit showed every output was a prefix of the baseline: the saving was truncation. A survey of **23** training-free mechanism families found none that beats truncation without oracle labels.
- **Method: Entailment-Licensed In-Decoding Elision** (a sentence encoder proposes spans, an NLI model licenses them) beats truncation on every model while removing 0.9–2.2% of tokens. A 670-prompt reader study judged 49–69% of elisions harmful; scoping to discourse units lowered this to **10.2%** (95% CI 7.5–13.7%).
- **Conclusion:** ordinary answers contain little genuine restatement; larger cuts discard content users asked for. Behaviour transfers to sampling, batching, other precisions, six closed systems and six languages.

Analyzing Review Effort: Human vs. Agentic Pull Requests *2026*
Empirical Software Engineering · Repository Mining · Statistical Analysis

- Built a **reproducible GitHub-mining pipeline** to compare code-review effort on agent-generated versus human-authored pull requests across large-scale open-source repositories.
- Framed the study around a measurable question — does AI-generated code shift reviewer burden? — with defined inclusion criteria, comparable cohorts and quantified outcome measures.

SimCLR-Vision-SSL — Controlled Study of Augmentation in Contrastive Learning *2026*
PyTorch · SimCLR · SupCon · ONNX · FAISS

- Ran a **42-experiment augmentation sweep** isolating which transformations drive representation quality, then extended the setup with a semi-supervised **SupCon** objective, reaching **84.30% top-1 accuracy** across classification and retrieval evaluation.

Deep RL for Cloud Resource Provisioning — Benchmarked Against Real Baselines *2026*
PPO · DQN · Custom Gymnasium Environment

- Built a custom simulation environment and compared **PPO** and **DQN** on a multi-objective cost–latency reward against **static** and **threshold-based** autoscaling policies actually used in practice.

Further Applied Research

- **HORUS Sentinel** — multi-agent OSINT platform correlating findings into a knowledge graph reasoned over by a self-hosted fine-tuned LLM.
- **SCRAP** — predictive modelling under an operationally constrained **48-hour** lead-time window.
- **Horus-OSINT** — domain adaptation of **Meta-Llama-3-8B** on **159,826** GTD/GDELT records, deployed on AWS.

PROFESSIONAL & TEACHING EXPERIENCE

AI Engineer Intern *Oct 2026 – Present*
Injaz Tech — Injaz Group (formerly Fingerprint Consultancy) Maadi, Cairo, Egypt

- Built an agentic RAG assistant (LangChain, LangGraph, FAISS, FastAPI); each design choice settled by measurement, raising top-1 retrieval accuracy from **75% to 94%**.
- Evaluated its LLM components as models: relevance-grader recall **17% to 88%**; LLM-judge agreement with a deterministic metric **0.82**.

Part-Time Instructor — Machine Learning & AI for Business *Jul 2025 – Present*
National Telecommunication Institute (NTI) Egypt

- Teach **Machine Learning** (90-hour bootcamps) and **AI for Business** modules in NTI's Summer Internships Program, on separate engagements.

AI in Cybersecurity Intern *Jun 2025 – Jul 2025*
e& Egypt — via NTI (On-the-Job Training) Cairo, Egypt

- Applied AI-driven tooling across threat intelligence, digital forensics and enterprise security analysis.

Systems Engineer (Military Service) *Feb 2024 – Mar 2025*
National Company for Roads Building & Development Cairo, Egypt

- Supported backend systems for national toll infrastructure serving **50%+ of Egyptian vehicles**; co-developed an internal data-management application in **C#, .NET, SQL Server**.

Online Instructor — AI, Algorithms & Data Science *2020 – Present*
Udemy & YouTube Remote

- Authored Arabic-language curricula in discrete mathematics, algorithms, probability and graph data mining for **10,000+ learners** (**700K+ views**).

AWARDS, CERTIFICATIONS & LANGUAGES

Digilians Presidential Scholarship — Queen's University
Finalist — ISEIC 2023
Ideal Student Award — Assiut University, 2022–2023
AWS Academy — ML Foundations, ML for NLP, Data Engineering
Semi-Finalist — Microsoft Imagine Cup 2023
1st Place — Smart Cities Hackathon 2022
Machine Learning Specialization — DeepLearning.AI
HCIP – AI (Huawei)

- **Languages:** Arabic (Native) · English (Professional Working Proficiency).
